

THERAPEUTIC PAD SYSTEM

ABSTRACT OF THE DISCLOSURE

A therapeutic pad system comprises an ice patch having a generally disc-shaped configuration. The ice patch has a circular generally parallel first and second walls fabricated of a plastic-vinyl material. A non-solid gel which is capable of being frozen, thawed and re-frozen a plurality of times is located within the space between the walls. A jacket is fabricated of a cloth material and has a generally disc shaped configuration with an interior panel and an exterior panel and a pocket there between for receiving the ice patch. Common stitching is over approximately the lower two-thirds of the jacket and the upper one-third forms an opening. Decorative indicia coupled to the exterior panel of the jacket.
